| <p style="text-align: center;">Laboratory 11 Active Data Warehousing</p> |
|--|

In this Lab session, you will be assigned into a group and you are required to discuss the following:

1. What is Active Data Warehousing?
2. What are the similarities and differences between Active Data Warehousing and Passive Data Warehousing?
3. Why is Active Data Warehousing important?
4. Discuss the Active DW Architecture.
5. What are the challenges faced in implementing Active DW?
6. Give an example of Active DW in the industry and discuss how it works.

You will be given some time during the Lab class to discuss the above questions. Each group is expected to prepare a **5-minute presentation**.

You are not limited to discuss the questions listed above or the materials you learned from the lecture. You are, however, required to do some research on the topic. All your findings and opinions should be summarised and analysed through the five minute group presentation.

THE END
