Production Planning and Execution (PP)

This case study explains an integrated production planning and execution process in detail and thus fosters a thorough understanding of each process step and underlying SAP functionality.

MOTIVATION

The data entry requirements in the production planning exercises (PP 1 through PP 6) were minimized because much of the data already existed in the SAP system. This stored data, known as master data, simplifies the processing of business transactions. Examples for this were material master data, bills of materials, and routings.

In this case study, we will create consumption values for a finished product to plan and process a complete manufacturing cycle.

PREREQUISITES

Before you use this case study, you should be familiar with navigation in the SAP system.

In order to successfully work through this case study, it is not necessary to have finished the PP exercises (PP 1 through PP 6).

NOTES

This case study uses the Global Bike data set, which has exclusively been created for SAP UA global curricula.

SAP University Alliances

Process Overview

Learning Objective Understand and perform a manufacturing process cycle. **Time** 140 min

Scenario In order to experience a complete manufacturing process you will take on different roles within the Global Bike Group, e.g. production supervisor, shop floor worker and plant manager. Overall, you will be working in the Materials Management (MM) and the Production Planning and Execution (PP) departments.
Employees involved	Jun Lee (Production Supervisor)
	Hiro Abe (Plant Manager Dallas)
	Lars Iseler (Production Order Worker)
	Susanne Castro (Receiving Clerk)
	Sanjay Datar (Warehouse Employee)
	Michael Brauer (Shop Floor Worker 4)
	Jamie Shamblin (Cost Accountant)

Before you can start forecasting demand for your touring bike product group, changes in the material master record of the bikes need to be maintained.

Afterwards you will create a 12-month sales and operations plan (SOP) for your product group, receive the production relevant goods from the warehouse storage location and issue them to the production order.

To conclude the process, the production is confirmed as complete, the finished goods are received into the warehouse and costs assigned to the production order are analyzed.

Table of Contents

*Note: During certain steps in this case study you will be instructed to take a screenshot of your results.   Make sure that you complete it before continuing as it may be difficult to repeat later. There are five (5) of these steps.

Also make sure that the screenshot includes any Master Data which displays your user-id (###).   E.g. Material codes, Product groups, Sales forecasts, Stock requirements, Cost analysis

Step 1: Change Material Master Record

Task Prepare a material master record for Demand Planning.	**Time** 20 min
Short Description In order to plan Global Bike's deluxe touring bikes (black, silver and red) prepare their material master records by changing the MRP 3 and Forecast view.	
Name (Position) Jun Lee (Production Supervisor)	

To change a material's view, use the App *Change Material* in the *Production Planning and Execution* group.

Fiori App

```
Change Material
```

In the Material field, find and select your red Deluxe Touring bike **DXTR3###** first.

DXTR3###

If you do not remember its material number, position your cursor in the Material field and click on the search icon 🔍 or press **F4**. Make sure you are on the Material by Material Type tab. Select Material Type **Finished Product** (FERT) and enter ***###** in the Material field. Remember to replace ### by your three-digit number given by your instructor, e.g. *005 if your number is 005. Then, press *Enter* and select the red Deluxe Touring bike with a double click.

F4

Finished Product
*###

When your material number (**DXTR3###**) is entered in the Material field, click on Continue or press *Enter*.
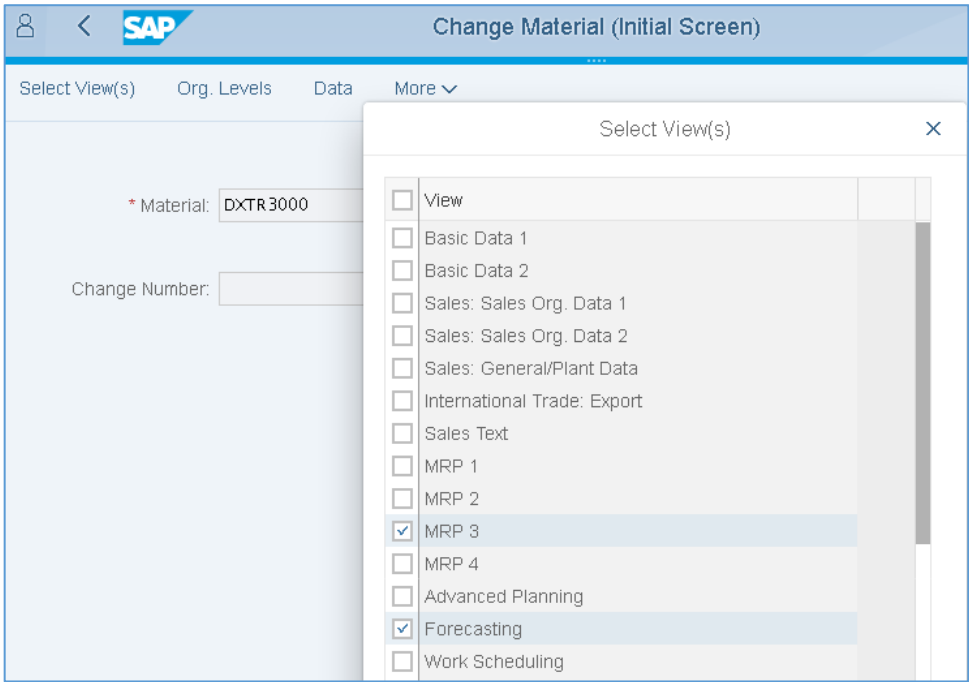

DXTR3###

On the following screen, select **MRP 3** and **Forecasting**.
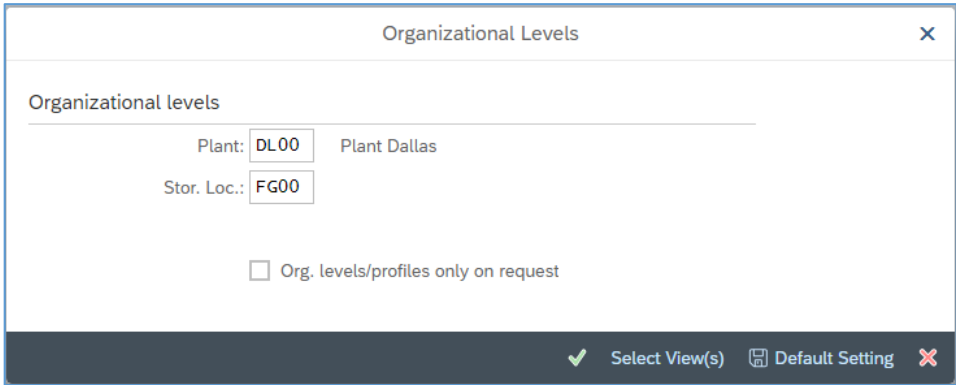

Then, press *Enter* or click on ✅.

MRP 3
Forecast

In the following pop up enter the Global Bike manufacturing facility in Dallas **DL00** and its Finished Goods Stor. Location **FG00**. Press *Enter* or click on ✔.

DL00

FG00

In the *MRP 3* tab, enter
Strategy group **40** (Planning with final assembly),
Consumption mode **1** (Backward consumption only) and
Bwd.consumption per. **30**.
Then click *Enter*.

40
1
30

Press *Enter* again to acknowledge the warning message to check the consumption periods.

On the *Forecasting* tab, enter
Initialization pds **12**,
uncheck the checkbox **Reset automatically**,
check the checkbox **Param.optimization**,
enter Optimization level **F** (Fine),
Alpha factor **0,20**, Beta factor **0,10**, Gamma factor **0,30**, and Delta factor **0,30**.

Compare your entries with the screen capture shown below.

12
~~Reset automatically~~
Param.optimization
F
0.20
0.10
0.30
0.30

Historic consumption values already have been entered into the GBI system. You can view them on the Forecasting tab, select

. If you do not see the Total

consumption column, press on . Within the table *scroll down* to see the Total Consumption for the periods 04.2014 to 03.2018.

These values form the base for later forecasts within this case study.

Material:	DXTR3016
Descr.:*	Deluxe Touring Bike (red)
Plant:	DL00 Plant Dallas

Base Unit of Measure: EA   Period

Consumption values

Period	Total consumption	Corrected value
04/2018	0	
03/2018	0	100
02/2018	0	102
01/2018	0	109
12/2017	0	93
11/2017	0	83
10/2017	0	85
09/2017	0	92
08/2017	0	85
07/2017	0	78
06/2017	0	75
05/2017	0	85
04/2017	0	80
03/2017	0	80

Unplnd consumption

Please note that within a productive system these values would have been updated based on the goods moved out of the warehouse.

Click on the Main Data menu item to return to the overview.

Click on Save to save your entries for the red bike.

The system informs you, that the material DXTR3### changed.

Material DXTR3000 changed

Repeat the same procedure for the silver and the black deluxe touring bike material master. Start with the silver bike (**DXTR2###**), then modify the black bike (**DXTR1###**).

DXTR2###
DXTR1###

Click on the home icon to return to the Fiori Launchpad overview.
(Click **OK** if you see an "unsaved data" message)

Step 2: Change Routing

Task Change a routing for a finished good.	**Time** 15 min
Short Description Change the routing for your red Deluxe Touring bike.	
Name (Position) Jun Lee (Production Supervisor)	

After the operational steps are laid out, the components must be allocated to the individual operations. This is a progressive process where each operation builds off the materials that entered production in the previous operations.

Component allocation

To change a routing, use the app *Change Routing*.

Fiori App

Enter the material number for your red Deluxe Touring Bike (**DXTR3###**). In the Plant field, enter Global Bike's Dallas plant number (**DL00**). Please ensure that the Group field is empty.

DXTR3###
DL00

Then, press *Enter* or click on Continue .

Note A routing can be defined using the routing group and group counter. Moreover, the routing contains reference to the material whose production it describes, and, in addition to the standard sequence, can contain parallel or alternative sequences. Alongside the standard values, the routing also contains the time elements that are relevant for scheduling operations. Each operation in the routing may contain its own base quantity, to which these time elements may refer.

Choose the [Allocation] menu item and select [✓] the red touring frame (**TRFR3###**) as well as the touring seat kit (**TRSK1###**). Now choose [New Assignment].

TRFR3###
TRSK1###

STEP A: Take a screenshot of the *Material Component Overview* screen as show above. Make sure that the Material Code (DXTR3###) is included.

Save your entries with Save .

☑ Routing was saved with group 50000004 and material DXTR3000.

Click on the home icon 🏠 to return to the Fiori Launchpad overview.

Step 3: Display Product Group

Task Display a product group.	**Time** 5 min
Short Description Display the product group (product family) for all your Deluxe Touring bikes.	
Name (Position) Jun Lee (Production Supervisor)	

A product group (product family) supports high-level planning. This way, it is not necessary to delve into the minutia of creating planning forecasts for every material in the company.

Product group

To display the deluxe touring bike product group, use the app *Display Product Group*.

Fiori App

Display Product
Group

In the Display Product Group: Initial Screen, in the Product group field find and select your group for deluxe touring bikes. In order to do so, press the

search icon ⬚ (or pressed F4), enter **###*** in the Material description field.
Remember to replace ### with your three-digit number, e.g. enter 009* if your number is 009. Enter **DL00** as Plant.

###*

DL00

Name of the product group (1)	✕
⌄ Find product group via MRP controller Find product group via description	∘∘∘
MRP Controller:	
Material description: 014*	
Language Key: EN	
Product group:	
Plant: DL00 ⬚	
Maximum No. of Hits: 500	
Find Cancel	

Then, press *Enter* or click on Find to display the search results.

Compare with the screen shown below. Double-click on the line for deluxe touring bicycles to select the group.

Now that the correct product group (**PG-DXTR###**) is filled in, make sure that Plant **DL00** is entered.

PG-DXTR###
DL00

Then, press *Enter* to display the product group details.

On this screen you can see that this product group defines proportions for three different bikes: the black, silver and red deluxe touring bike. For the black bike a share of 40% will be considered and 30% for the silver and the red bikes each.

Click on the home icon [home icon] to return to the Fiori Launchpad overview.

Step 4: Create Sales and Operations Plan

|	
Task Create a sales and operations plan for a product group.	**Time** 20 min
Short Description Create a 12-month sales and operations plan (SOP) for your product group.	
Name (Position) Jun Lee (Production Supervisor)	

A sales and operations plan (SOP) is a planning tool used to consolidate data for forecasting future sales and production levels as well as the methods needed to meet those requirements. In this task, our SOP will be based on historical consumption values taken from a fixed period. This is in contrast to forecasting within a real-life system which would base the prediction on previous periods and their respective consumption.
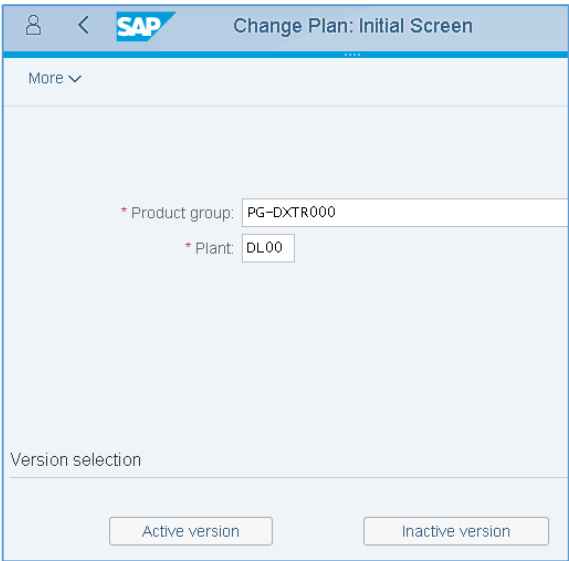

Sales and operations plan

To create an SOP, use the app *Create Sales and Operations Plan*.

Fiori App

Create Sales and Operations Plan
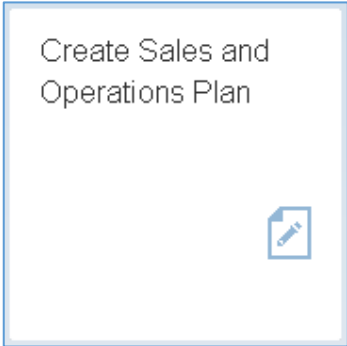

Make sure that Product group **PG-DXTR###** and Plant **DL00** are entered

* Plant: DL00

Version selection

Active version   Inactive version

Then, select [Active version].

Record the version number: _____

In the menu bar, select:

More ► Edit ► Create sales plan ► Forecast…

Select **Period intervals**,
Forecast from **current period/current year** to **previous period/next year**,
Historic Data from **04/2014** to **03/2018**,
Forecast execution **Aut. model selection**.

Compare your screen with the one below before clicking on [Forecasting].

If there are any warning messages click on [✓] and continue.

You will see that the system has selected **_Trend and season_**. Click on
[Forecasting] again.

In the next pop-up, _Forecast: Results_ you can see that the system tested and found Seasonal and Trend tendencies in the past consumption data and has applied a Seasonal Trend Model.

Click on ✔ (Copy and Save). The sales forecast is copied into your Sales and Operations Plan.

As *Target day's supply* enter **5** for each forecasted period. (**12 periods only**).

5

In a production plan, you plan the quantities you need to produce in order to meet your sales plan. The system then calculates stock levels and days' supply for each period on the basis of the sales and production quantities and any target data. There are several different planning strategies available, which differ in the production values and the stock levels proposed.

As the SOP is a high-level planning, discrete production values are not necessary. The SAP system calculates discrete numbers once the SOP is transferred to the Demand Management.

In the menu bar, select:

More ► Edit ► Create product plan ► Synchronous to sales

Note the change in the Production and in the Stock level lines. The production plan is created to match the sales forecast. (Your numbers may be different).

Planning Table	Un	M 05/2019	M 06/2019	M 07/2019	M 08/2019	M 09/2019

Display material
list

Press *Enter*.

A warning message will appear asking you to check input parameters. Press *Enter* to confirm and bypass the warning message.

Note In MRP, a net requirements calculation is executed in the planning run to determine whether a material shortage exists for a certain material. In addition, stock and fixed receipts that currently exist (for example, purchase orders, production orders, fixed purchase requisitions and planned orders) are compared with the safety stock and requirements. The result of this comparison is the quantity available for planning.

If the quantity available for planning is lower than zero, a material shortage exists. MRP reacts to material shortages by creating new procurement proposals (purchase requisitions and planned orders). The suggested procurement quantity results from the lot-sizing procedure that is set in the material master.

Click on the home icon ⌂ to return to the Fiori Launchpad.

Step 8: Review Stock/Requirements List

Task Review the Stock/Requirements List.	**Tim**
Short Description Review the Stock/Requirements List for your deluxe touring bike.	
Name (Position) Lars Iseler (Production Order Worker)	

The Stock/Requirements List is a list which dynamically changes whenever a transaction occurs using the given material. Display and review the Stock/Requirements List for all materials of the red deluxe touring bike on hand and the demand that exists against these products. The report shows that there is no stock and therefore nothing is available for use at this time.

Stock/R

To review the Stock/Requirements List, use the SAP Fiori App *Monitor Stock / Requirements List*.

Monitor Stock /
Requirements List

On the Individual access tab, enter Material **DXTR3###** and Plant **DL00** and click on Continue .

Choose [Σ] (Switch to Period Totals). This will allow you to see the planned independent requirements, planned receipts, and Available to Promise (ATP) quantities based on time - days, weeks, or months.

To view the details of the **first** planned order (**PldOrd**), select [🔍] (Element Details).

Select (Pegged Requirements).

You can see that this planned order is to fulfill our Safety Stock and the first planned independent requirement that was created when we disaggregated our SOP.

STEP C: Take a screenshot of the *Pegged Requirements* screen as shown above. Make sure to include the Material Code (DXTR3###).

Click on the home icon to return to the Fiori Launchpad overview.

Step 9: Convert Planned Order into Production Order

Task Convert a planned order into a production order.	**Time** 10 min
Short Description Convert a planned order generated in the MPS/MRP run to a production order. The stock requirements list displays the suggested planned orders from the MPS run.	
Name (Position) Lars Iseler (Production Order Worker)	

To convert planned orders into production orders, use the SAP Fiori App *Monitor Stock / Requirements List*.

Enter Material **DXTR3###**, Plant **DL00**, and click on [Continue]. Then, double-click on the **third** planned order.

Note that your dates and quantities may be different.

In the Additional Data screen, click on [-> Prod.Ord.] (Convert planned order to production order).

100

Note At this point, please note down the total quantity in your production order. You will need it later when confirming your order.

Total quantity

_____

Determine the status of your order by clicking on [i]. What does this mean?

Note When you converted the planned order to a production order scheduling takes place, an availability check was automatically carried out and a reservation was placed on the materials specified within the bill of materials. The order was also automatically released when the production order was created.

Click on [<] to go back to the *Production order Create: Header* screen and save your production order with [Save].

Note When you save the production order the system will automatically calculate the planned costs for the production order and the production order is given a number.

Production order number

_____

Order number 1000024 saved

Make sure you record your production order number.

Select [Refresh] to refresh the Stock/Requirements List. In the MRP Element column the planned order **PldOrd** that you selected should now have changed into a production order **PrdOrd**.

🔍	07/01/2019	IndReq	VSF			110-

Click on the home icon [🏠] to return to the Fiori Launchpad overview.

☐

Step 10: Receive Goods in Inventory

Task Receive goods in the Dallas plant.	**Time** 10 min
Short Description Receive enough goods in the Dallas storage locations to start the production process.	

Usually, at this point the purchasing department in Dallas would take over and procure enough raw materials from vendors to fill the inventory so that the production process can be initiated. In this case study, we are bypassing this procurement process (this process is explained in the MM unit in detail). Because the inventory for all DXTR3### components is empty, we will assume that we find 500 pieces each in the storage location.

To receive goods in the inventory, use the app *Post Goods Movement*.

Make sure that **Goods Receipt** and **Other** is selected in the drop-down menu.
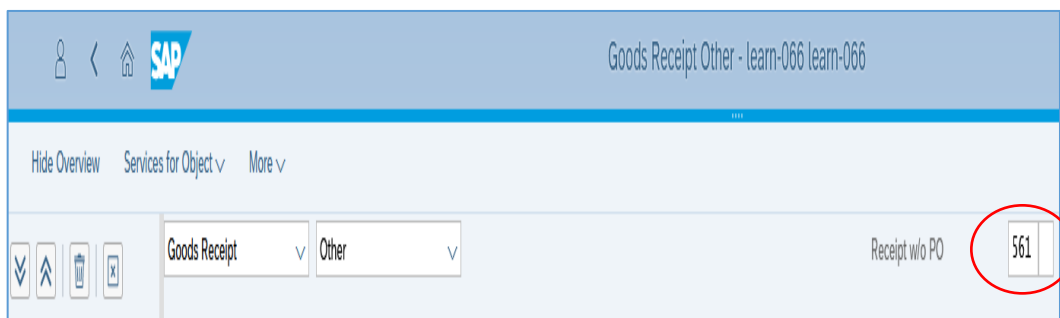

Enter Movement Type **561** (Receipt per initial entry of stock balances into unrestricted use),
and **today's date** as Document and Posting Date.
Then, press *Enter*. If necessary, confirm the information pop-up.

561
today

If you now click on the *Close Detail Data* button you will be able to enter the ten materials which are the components that are needed in your production order later.

Enter the Material Code in the *Mat. Short Text* field, and the *Quantity* and *Storage Location* as shown below.

Note that all materials are stored in the **raw materials** storage location in Dallas (**DL00**) except the touring wheel assembly (first component in the list) which is a **semi-finished good**.

Material	Quantity	SLoc
TRWA1### (Touring Aluminum Wheel Assembly)	500	SF00
TRFR3### (Touring Frame-Red)	500	RM00
DGAM1### (Derailleur Gear Assembly)	500	RM00
TRSK1### (Touring Seat Kit)	500	RM00
TRHB1### (Touring Handle Bar)	500	RM00
PEDL1### (Pedal Assembly)	500	RM00
CHAN1### (Chain)	500	RM00
BRKT1### (Brake Kit)	500	RM00
WDOC1### (Warranty Document)	500	RM00
PCKG1### (Packaging)	500	RM00

Enter DL00 as *Plnt* in all of the ten lines. After each line, press *Enter*.

Compare your screen with the screenshot shown below.

Line	Mat. Short Text	Wa...	OK	Qty in UnE	EUn	SLoc
1	Touring Aluminum Wheel Assembly	☐	☑	500	EA	Semi-Fin. Goods
2	Touring Frame-Red	☐	☑	500	EA	Raw Materials
3	Derailleur Gear Assembly	☐	☑	500	EA	Raw Materials
4	Touring Seat Kit	☐	☑	500	EA	Raw Materials
5	Touring Handle Bar	☐	☑	500	EA	Raw Materials
6	Pedal Assembly	☐	☑	500	EA	Raw Materials
7	Chain	☐	☑	500	EA	Raw Materials
8	Brake Kit	☐	☑	500	EA	Raw Materials
9	Warranty Document	☐	☑	500	EA	Raw Materials
10	Packaging	☐	☑	500	EA	Raw Materials

Save your goods receipt with [Post] and record the material document number.

Click on the home icon 🏠 to return to the Fiori Launchpad overview.

Step 11: Issue Goods to Production Order

Task Issue goods to a production order. **Short Description** Now that all necessary components are on stock issue them to your production order in precise quantity.	**Time** 10 min

The goods issue process is fully defined in the production order, BOM, and routing. The quantities and the materials are reserved for this specific production order, they will be withdrawn with reference to the order number and will be used to assign actual costs to the production order for managerial accounting purposes.	Goods issue

To issue goods to a production order, use the app *Post Goods Movement*.	Fiori App

Post Goods
Movement

Make sure that **Goods Issue** and **Order** is selected.

Note Goods issues posting for the required components is another milestone in the production order process. The following functions are performed when a GI for the components of the production order is posted:
- Storage-location-specific update of the stock and consumption fields
- Reduction of the reservation (for planned withdrawal)
- Update of costs for unplanned withdrawals
- Determination of actual costs (valuation) and order update
- Consumption update
- Generation of material and accounting documents (FI and CO documents)
- Creation of material document.
- Creation of accounting document
- Creation of controlling document
- Printing of GI document
